

Glow: SPHERE

The Glow: Sphere is a lighting feature created using a UV stable acrylic tube, filled with 7 tails of our PMMA fibre and with a polythene ball affixed to the top.

Spheres are available in various lengths and there are 2 sizes of ball to choose from. They are also fitted with ground spikes for installation into softer ground.

Since the spheres are illuminated by one, or multiple, fibre optic light sources they can take advantage of all the colour changing, twinkling effects and control options that our light source range offers.

TECHNICAL INFORMATION

Material	UV stable acrylic / polythene
Rod / Sphere Finish	Transparent
Effects	Colour change (with compatible light source)
Rod Diameter	10mm
Min. Length	1000mm
Max. Length	2000mm (increases in 500mm increments)
Fibre	PMMA fibre
Mounting	Ground spike
